

Carlo Alberto Medal Lecture:
Global Capital Allocation Project

Matteo Maggiori
Stanford

June 8th 2021

Global Capital Allocation

The basic question of how capital is allocated globally

Who gets it? Who provides it? Which risks are shared? Which new risks are created?

Global Capital Allocation

The basic question of how capital is allocated globally

Who gets it? Who provides it? Which risks are shared? Which new risks are created?

- ▶ Benefits:
 - ▶ Transfer capital from savers to productive users
 - ▶ Share risks, diversify
 - ▶ Equilibrate exchange rates, safe interest rates, cost of capital

Global Capital Allocation

The basic question of how capital is allocated globally

Who gets it? Who provides it? Which risks are shared? Which new risks are created?

- ▶ Benefits:
 - ▶ Transfer capital from savers to productive users
 - ▶ Share risks, diversify
 - ▶ Equilibrate exchange rates, safe interest rates, cost of capital
- ▶ Problems:
 - ▶ Capital flights, crises, and endogenous amplification of risks
 - ▶ Unequal access to capital: global capital markets not a level playing field
 - ▶ System can be gamed: multinationals and tax havens

Global Capital Allocation Project

- ▶ Last 15 years dominated by severe crises and policy interventions in capital markets
- ▶ Realization that “*who owns which assets*” is an important macro question
- ▶ GCAP is a research effort to shed light on how capital moves around the world and design better policies to improve outcomes

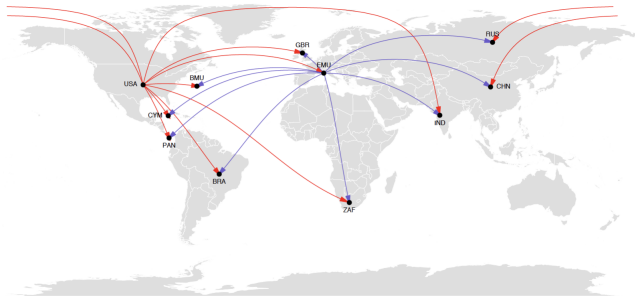

Global Capital Allocation Project

- ▶ Last 15 years dominated by severe crises and policy interventions in capital markets
- ▶ Realization that “*who owns which assets*” is an important macro question
- ▶ GCAP is a research effort to shed light on how capital moves around the world and design better policies to improve outcomes
- ▶ Today we'll focus on:
 - ▶ The importance of currency in shaping capital allocations
 - ▶ The role of international currencies
 - ▶ Tax havens and offshore financial centers

THE GLOBAL CAPITAL ALLOCATION PROJECT

RESEARCH DATA GRAPHICS TEACHING PRESS ABOUT US

OUR AIM IS TO SHED LIGHT ON HOW CAPITAL MOVES AROUND THE WORLD TO
IMPROVE INTERNATIONAL ECONOMIC POLICY

UPDATES

Jesse Schreger Named 2021 Sloan Research Fellow

Feb 17, 2021

Jesse Schreger was one of eight economists to receive a Sloan Fellowship in 2021.

IN THE NEWS

NBER Reporter: "The Global Capital Allocation Project"

Mar 31, 2021

"In recent decades, global flows of assets and goods have grown rapidly relative to GDP and have shifted aggressively during crises such as the global financial crisis and the current pandemic. Corporations and governments increasingly borrow from foreign investors, who face more options for allocating their capital in terms of asset class, currency, and geography. A sense of "who owns what" around the world, and why, is required to understand what these trends mean for the global economy. Our research aims to expand this understanding and explore the key elements driving global capital allocation."

Bloomberg: "Treasury Has \$541 Billion of Dirty Little Secrets"

Sep 21, 2020

"Government data may tell you there's little at risk — Americans held only \$154 billion of Chinese shares in 2017, according to the Treasury Department. This is a gross underestimation, Harvard University's Antonio Coppola and his colleagues conclude. In a recent paper, the academics put exposure at \$686 billion by 2017, or 4.5 times the official figure."

NBER Digest: "Tax Haven Financing Slows Cross-Border Investment Statistics"

Jul 1, 2020

"Official statistics on foreign investment show that investment from the United States, the Americas, and other nations

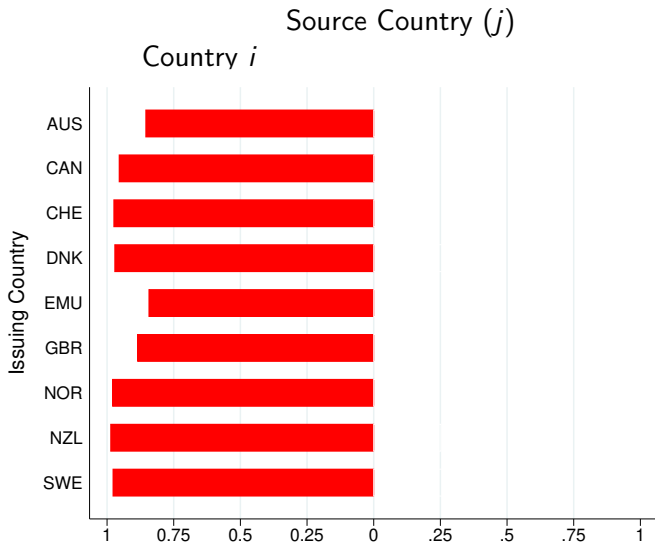

Basic Stylized Facts: Home Country and Currency Bias

- ▶ Home bias: investors overweight domestic securities
- ▶ Use micro-data to dig deeper
 - ▶ Establish importance of currency in shaping global portfolios
 - ▶ “Home currency bias”

Morningstar Holding Data

- ▶ \$37 trillion (in 2017) of worldwide mutual fund and ETF positions from Morningstar
- ▶ Position-level: unique CUSIP
- ▶ We focus on 10 developed markets
- ▶ Long time series: USA since 1995, RoW since 2003
- ▶ We harmonize the data and merge it with security and firm information

Share of Investment in Country i 's Corporate Debt in i 's Currency, 2017

Share of Investment in Country i 's Corporate Debt in i 's Currency, 2017

Share of Investment in Country i 's Corporate Debt in i 's Currency, 2017

Identifying the Importance of Currency: Micro Data

- ▶ Run security-level regressions to study how investors in different countries buy the debt of the *same* firm in *different* currencies:

$$s_{j,p,c} = \alpha_j + \delta_{j,p} + \beta_j \mathbf{1}_{\{\text{Currency}_c = LC_j\}} + \text{Controls} + \epsilon_{j,p,c}$$

- ▶ $s_{j,p,c}$ is share of security c issued by firm p that is held by country j
- ▶ Home currency dummy: $\mathbf{1}_{\{\text{Currency}_c = LC_j\}}$
- ▶ $\delta_{j,p}$ is a firm (ultimate parent) fixed effect
- ▶ Controls included for maturity and coupon

Within-Firm Variation, All Issuers

$$s_{j,p,c} = \alpha_j + \delta_{j,p} + \beta_j \mathbf{1}_{\{\text{Currency}_c = LC_j\}} + \text{Controls} + \epsilon_{j,p,c}$$

<i>j</i>	CAN	EMU	GBR	USA
Currency	0.899*** (0.013)	0.559*** (0.012)	0.446*** (0.022)	0.626*** (0.013)
Obs.	36,229	36,229	36,229	36,229
# of Firms	7,802	7,802	7,802	7,802
R^2	0.958	0.848	0.800	0.892
Firm FE	Yes	Yes	Yes	Yes
Controls	Yes	Yes	Yes	Yes

Estimates for year 2017, weighted least squares, SE clustered at firm level

Home-Country Bias and Home-Currency Bias?

► Similar regression framework, but now consider three specifications:

1. Home country dummy: $\mathbf{1}_{\{\text{Country}_p=j\}}$
2. Home currency dummy: $\mathbf{1}_{\{\text{Currency}_c=LC_j\}}$
3. Home country and home currency dummies

$$s_{i_p,j,p,c} = \alpha_j + \phi_j \mathbf{1}_{\{\text{Country}_p=j\}} + \beta_j \mathbf{1}_{\{\text{Currency}_c=LC_j\}} + \text{Controls} + \epsilon_{i_p,j,p,c}$$

► No firm fixed effects to allow for country variation

Bond Home-Country Bias and Home-Currency Bias

$$S_{i_p,j,p,c} = \alpha_j + \phi_j \mathbf{1}_{\{\text{Country}_p=j\}} + \text{Controls} + \epsilon_{i_p,j,p,c}$$

	Only Country Indicators

Currency Bias and Foreign Capital Allocation

- ▶ Investors buy bonds in their own currency or in USD
- ▶ How does this affect the allocation of capital to firms within and across countries?

Foreigners Avoid Local Currency Issuers

Canada

Foreigners Avoid LC Issuers Debt, Not Their Shares

Canada: Local Currency Issuers, Equity Securities

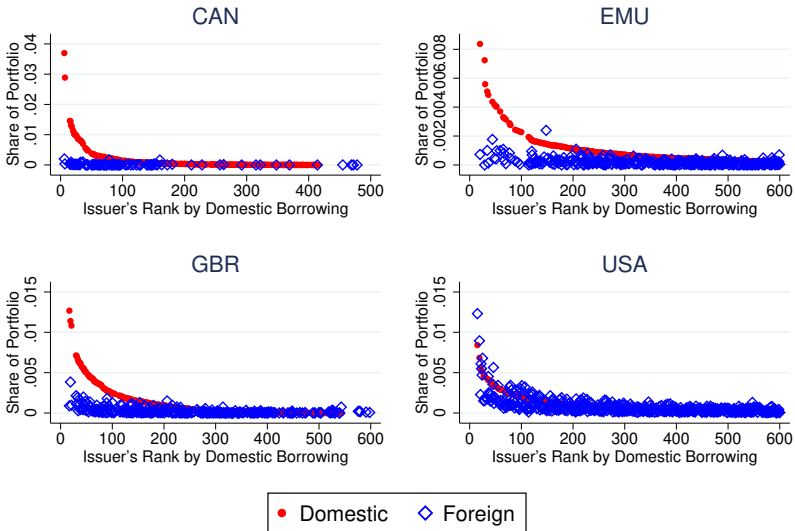

Local Currency Only Issuers

• Domestic ♦ Foreign

Local Currency Only Issuers

International Currencies

- ▶ International currency issuance affects capital allocation
- ▶ Novel benefits of issuing an international currency: akin to opening capital account for LC-only borrowers
- ▶ How has this status changed over time?

Changes in International Use of Currency

Corporate Bonds, Cross-Border Positions

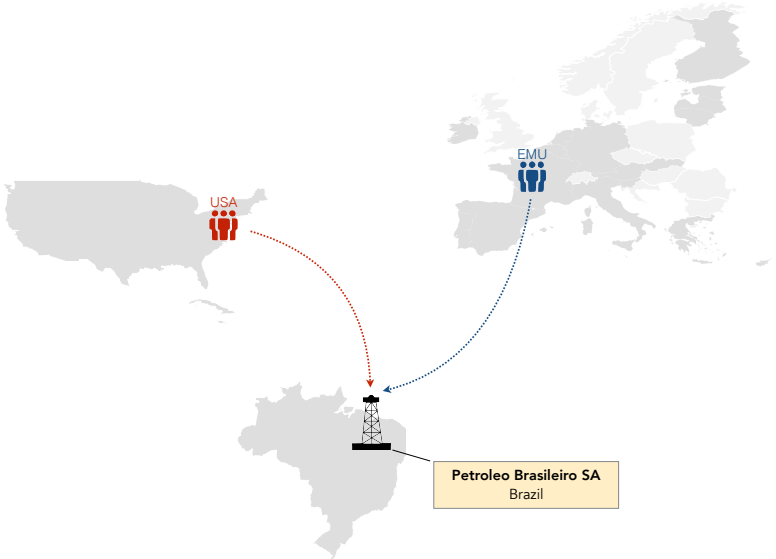

Many Open Questions

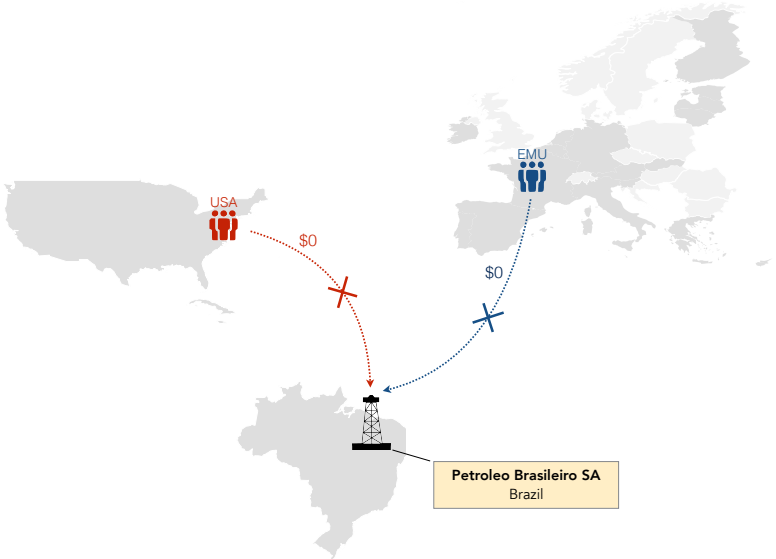

- ▶ What frictions prevent some firms from borrowing in foreign currency?
- ▶ What determines investor currency preferences?
- ▶ What are the real effects of changes in international currency use?
- ▶ What are the benefits and risks of dollar hegemony?

The Importance of Tax Havens and Offshore Centers

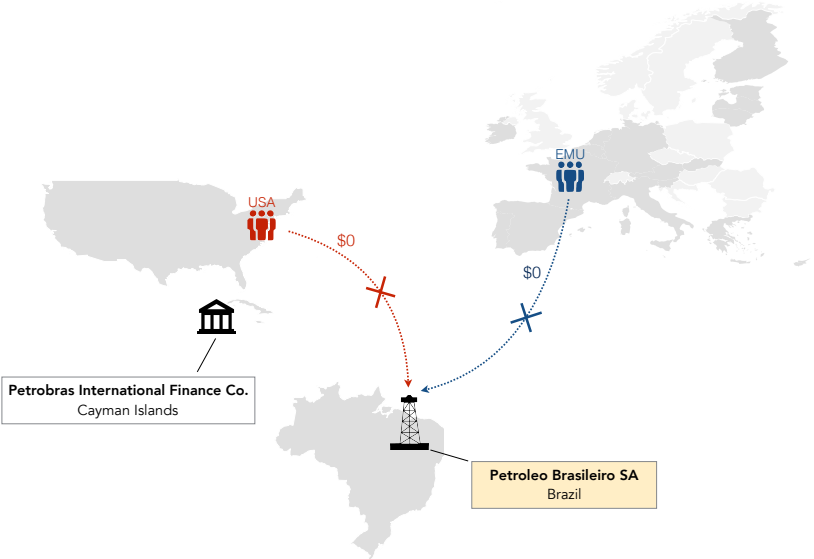

How Petrobras Raises Capital From Developed Countries

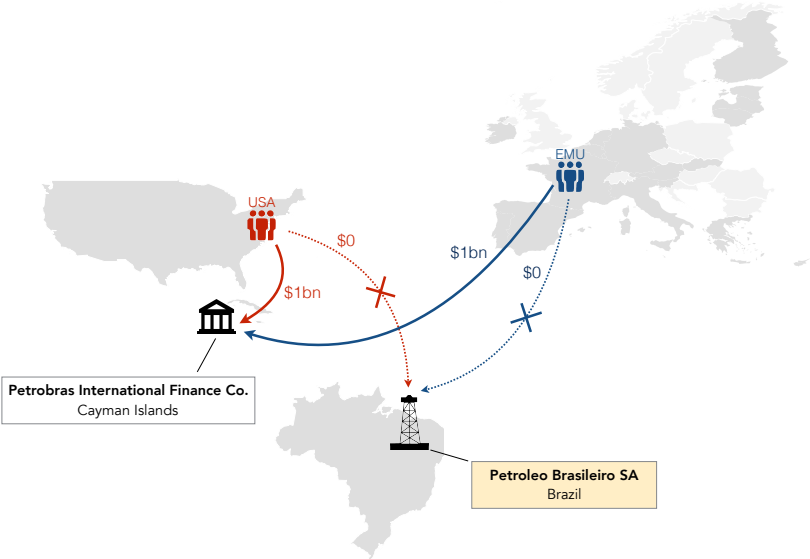

How Petrobras Raises Capital From Developed Countries

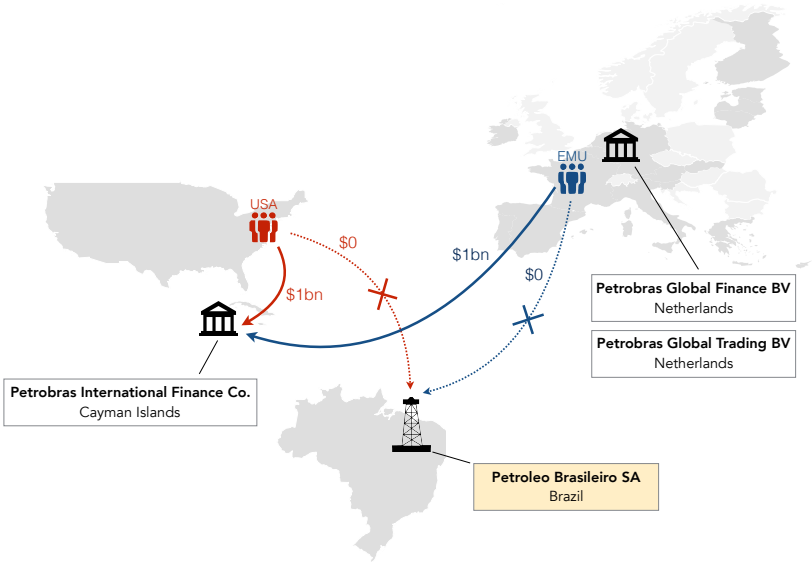

How Petrobras Raises Capital From Developed Countries

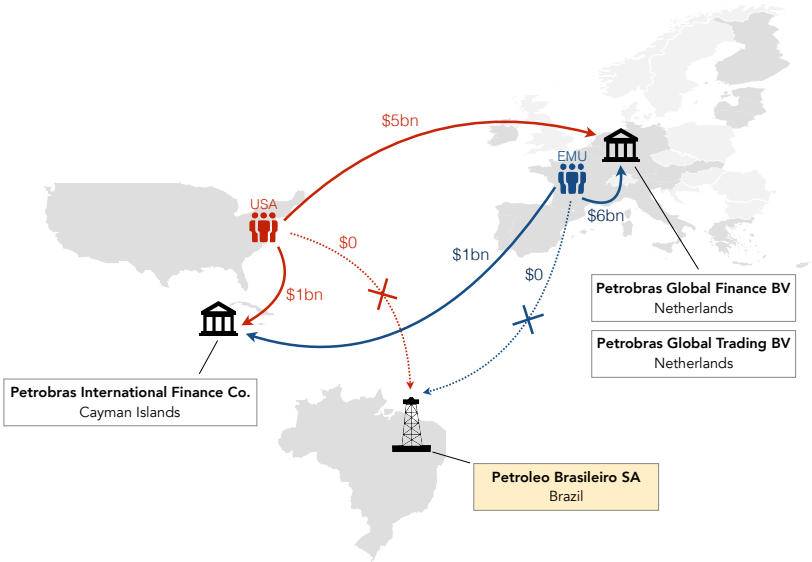

How Petrobras Raises Capital From Developed Countries

How Petrobras Raises Capital From Developed Countries

How Petrobras Raises Capital From Developed Countries

How Big A Deal is This?

- ▶ Tax Haven's (TH's) account for $> 10\%$ of all cross-border portfolio positions. 15% of US foreign portfolio holdings are in Cayman Islands!
- ▶ TH issuances account for $\approx 10\%$ of all corporate financing, and nearly 50% of all cross-border issuances
- ▶ For some emerging markets, *nearly all* of corporate sector's bond financing from developed markets flows through THs
- ▶ Rapid growth since at least 2005

Residency-based vs. Nationality-based Statistics

- ▶ What is meant by **Residency** and **Nationality**?
- ▶ Cases where **Residency** = **Nationality**:
 - ▶ Non-US governments issue USD bonds in New York (Brazil)
- ▶ Cases where **Nationality** \succ [?] **Residency** :
 - ▶ Issue through foreign operating subsidiary (Toyota Motors NA)
- ▶ Cases where **Nationality** \succ **Residency** :
 - ▶ Issue in THs through foreign shell-company (Petrobras)
 - ▶ Tax inversions to THs (Medtronic)

Aggregate Each Security to Ultimate Parent Company

- ▶ Use info from CGS, Morningstar, Factset, Dealogic, SDC, Capital IQ, and Orbis to map 27m securities from issuer (**Residency**) to ultimate parent (**Nationality**).

Issuer	Residency	Parent	Nationality	Value (\$B)
<i>A. Corporate bonds</i>				
Petrobras Intl. Finance Co.	CYM	Petroleo Brasileiro SA	BRA	12.8
Gaz Capital SA	LUX	Gazprom PJSC	RUS	29.7
<i>B. Equities</i>				
Alibaba Group Holding Ltd.	CYM	Alibaba Group Holding Ltd.	CHN	441.6
Medtronic Plc	IRL	Medtronic Plc	USA	85.7

Restating Official Statistics with Reallocation Matrices

- ▶ Merge mapping with Morningstar data on mutual fund and ETF + US Insurance companies + Norwegian SWF *positions*
- ▶ Key assumption: Within each year, asset class, and bilateral country pair, fund holdings are representative of the universe of portfolio investment
 - ▶ Verify assumption with US insurance and Norwegian SWF

Developed Market Investment in Chinese Equity

The Rise of China in Tax Havens

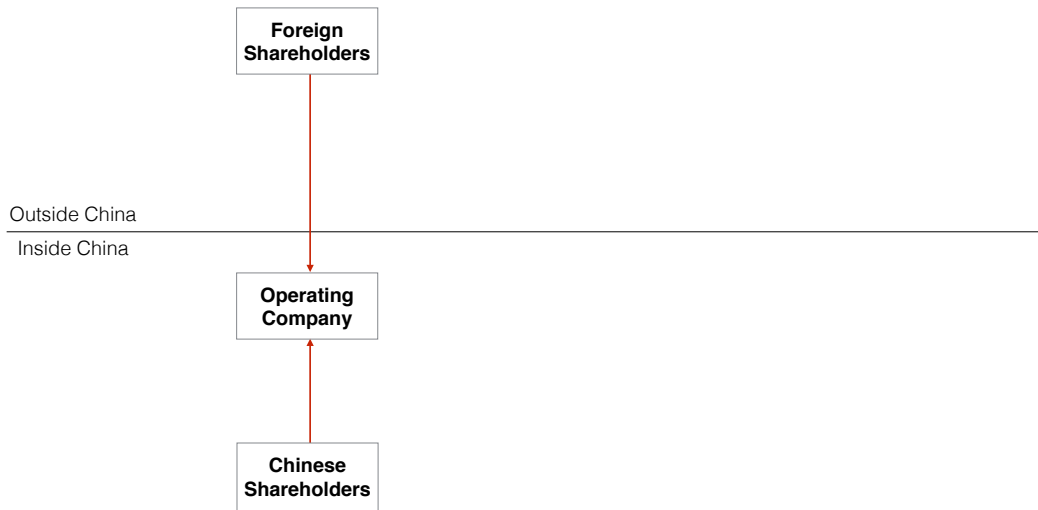

(a) Equities

(b) Bonds

Standard vs. VIE Structure

Standard Structure

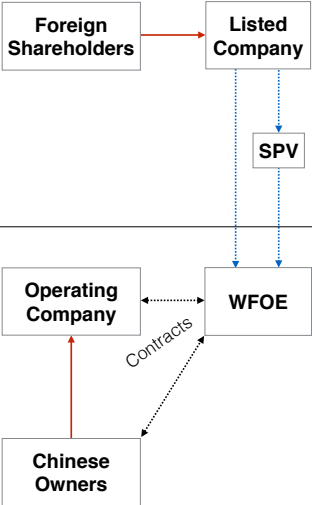

Standard vs. VIE Structure

Standard Structure

VIE Structure

Outside China

Inside China

Implications for China's Net Foreign Assets (NFA)

- ▶ Net Foreign Asset Position (*NFA*) captures net claims on RoW:

$$NFA = A - L$$

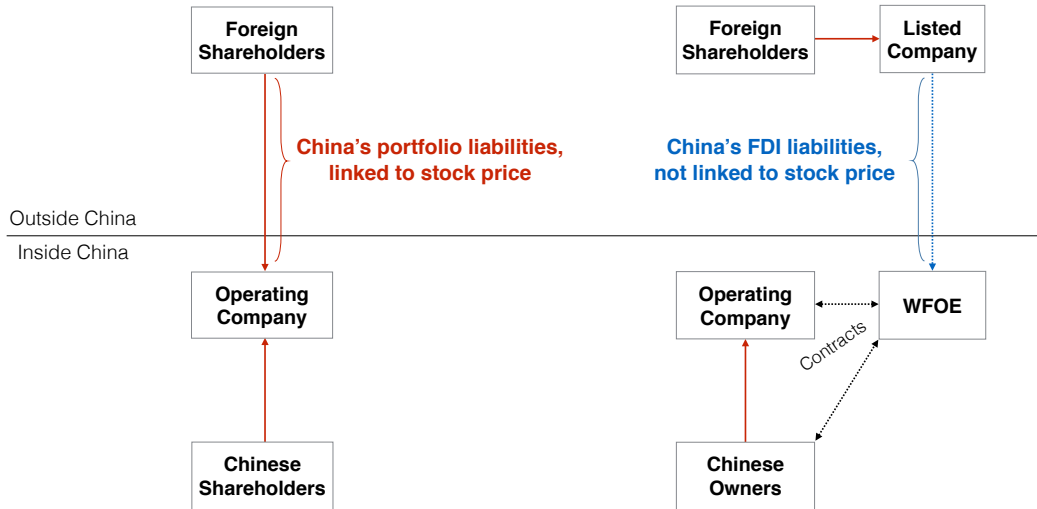

$$\Delta NFA = CA + \text{Valuation Changes}$$

- ▶ VIE structure causes understatement of *L*
 - ▶ Missing valuation changes

Implications for China's Net Foreign Assets (NFA)

Standard Structure

VIE Structure

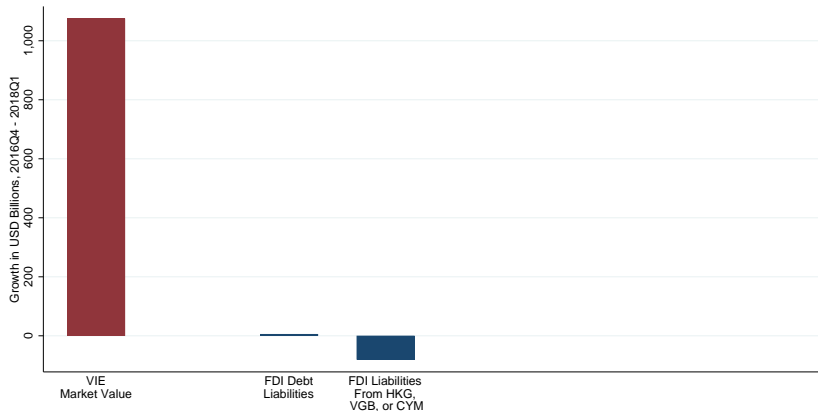

Does VIE Structure Result in Mismeasurement of NFA?

- Unclear exactly how positions associated with VIEs are booked. But they do not appear linked to listed company market values.

Might the VIEs Be in Other Liabilities Categories?

- ▶ Focusing on surge in value of VIEs from 2016:Q4 to 2018:Q1:

Might the VIEs Be in Other Liabilities Categories?

- ▶ Focusing on surge in value of VIEs from 2016:Q4 to 2018:Q1:

NFA Mismeasurement is Large

Much More in Paper and Online

- ▶ Alternate reallocation methodologies (e.g. sales)
- ▶ Full reallocation and issuance matrices by country, year, asset class
- ▶ Disaggregated bilateral investment data (currency, industry, by asset class)
- ▶ Results based on global issuance distribution matrix for many more countries

Sales-Based Reallocation

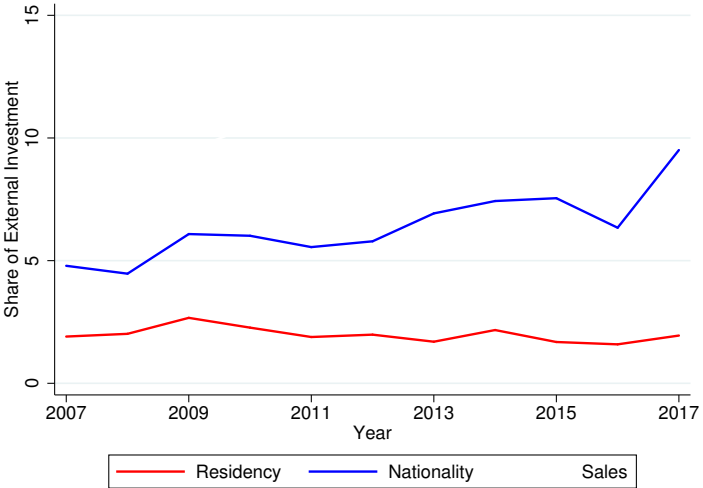

- ▶ Assign firms to *multiple* countries according to geographic distribution of sales
- ▶ China exposure becomes even larger than under nationality

The Rise of China in the US External Portfolio

The Rise of China in the US External Portfolio

The Rise of China in the US External Portfolio

Conclusion

- ▶ Novel view of Global Capital Allocations
- ▶ Methodology:
 - ▶ Pierce veil of THs and restate bilateral investments
- ▶ Takeaways:
 - ▶ Importance of currency
 - ▶ Large and growing dollar role
 - ▶ DM exposure to large EMs much bigger than in official data
 - ▶ Drives huge NFA mismeasurement in China (elsewhere?)
- ▶ Follow Global Capital Allocation Project, download estimates and codes:
